TANISHQ MISHRA - Software Engineer | Full-Stack & Automation

+91 9399788618 | Email | GitHub | Portfolio | LinkedIn | X

PROFESSIONAL SUMMARY:

Software Engineer at HealthyDay Healthtech building **production web apps, backend services and automation** with React, Next.js, Node.js, Python (Flask, FastAPI) and cloud (GCP, AWS). Also own **marketing tracking (GTM, GA4) and SEO**. Background in real-time systems, RAG-based AI platforms and microservices, with leadership and open-source contributions. Strong in DSA and system design (250+ LeetCode).

TECHNICAL SKILLS:

- **Languages:** JavaScript, TypeScript, Python, SQL
- **Frontend:** React, Next.js, Vite, TailwindCSS, Shadcn UI, TanStack Query, React Hook Form + Zod
- **Backend:** Node.js, Express, Fastify, Flask, FastAPI, REST APIs, WebSockets, SSE, Auth (JWT, Clerk, Firebase, OTP)
- **Databases:** PostgreSQL, MongoDB, MySQL, Prisma ORM, NeonDB, Pinecone
- **Cloud & DevOps:** Docker, Docker Compose, Nginx, AWS (EC2, S3), GCP (Cloud Run, Cloud Functions, Pub/Sub), Netlify, Vercel, GitHub Actions
- **Distributed Systems:** Microservices, TurboRepo (monorepo), Yjs (CRDT), Redis, RabbitMQ, Kafka
- **Automation & Tracking:** Make.com, WhatsApp automation (AiSensy), Webhooks, GTM, GA4 events, SEO, Razorpay
- **AI & Other:** RAG (LangChain, Pinecone), Gemini and Claude APIs, Electron, React Native (Expo)
- **Core CS:** DBMS, OS, Computer Networks, OOP, System Design, Linux, 250+ LeetCode problems

EXPERIENCE:

Software Engineer - HealthyDay Healthtech | 03/2026 - Present

- Main frontend engineer for the student portal and the registration, pricing and checkout site: React, TypeScript, Vite, Tailwind, TanStack Query, Netlify Functions.
- Built the Women's Hormonal Health care plan end to end: landing and upgrade page, assessment form, OTP-protected journey page and diet PDF.
- Built a Flask CSV export service on GCP for marketing audiences, with serverless proxies that keep API keys server-side.
- Automated WhatsApp nudges and reminders with Make.com, AiSensy and GCP Cloud Functions; wrote SQL data pulls for the team.
- Set up GTM and GA4 event tracking and SEO for marketing pages; worked on Meta CAPI and Google Ads conversion events.

Full-Stack Intern - Aurika Tech (Startup) | 06/2024 - 09/2024

- E-commerce platform for jewelry sellers on ONDC's API gateway: Node.js, TypeScript, React, Flask, Docker Compose, Nginx, AWS EC2 and S3.
- Improved and optimized core APIs to enhance backend functionality
- Implemented a new feature for inputting gold rates from admins and using them for product's pricing.
- Optimized Dockerfiles, resulting in faster build and deployment times.
- Designed and deployed a side application to streamline subscription transitions from pre-production to production environments.

Project Lead - Technorollix 2025 | 02/2025 - 03/2025

- Event registration platform for our college fest ([Live], [GitHub]): Next.js, server actions, MongoDB, Nginx on AWS EC2.
- Led requirements and system design; built JWT auth, team invites and Nodemailer emails (OTP, password reset, invites).
- Built the admin portal with role-based access for conveners and event heads.

Front End Lead - Technorollix 2024 | 02/2024 - 03/2024

- Built the fest website with Next.js, TailwindCSS and Framer Motion, working with copywriters and designers.
- Fixed cross-browser issues and tested before each deployment.

Front End Intern - Prodigy InfoTech | 11/2023 - 12/2023

Contributor - GSSOC 2024, Hacktoberfest 2023 & 2024

- 10+ PRs across open-source projects in Next.js, Django and Flask.
- Added Dockerfiles and Docker Compose setups for dev and production; fixed frontend bugs and styling.

PROJECTS:

[Link] [Git] Whiteboard - Real-Time Collaboration System

React, TypeScript, Yjs (CRDT), WebSockets, Fastify, PostgreSQL, Prisma, TurboRepo

- Architected a low-latency collaborative canvas using CRDTs (Yjs) for conflict-free real-time sync, offline edits, and intent-based undo/redo.
- Designed microservices (Auth, Sync, Persistence, Gateway) with Fastify and WebSockets to handle concurrent multi-user sessions.
- Implemented efficient state persistence using CRDT binary snapshots in PostgreSQL.
- Structured monorepo with shared types/packages, improving maintainability and developer velocity.

[Link] [Git] Zcrum – Full-Stack Project Management System

Next.js, Prisma, NeonDB (Serverless Postgres), Clerk

- Developed a Jira-like workflow system with real-time Kanban interactions and optimized client-side state management.
- Designed relational schema and Prisma models for scalable task/team relationships.

[Link] [Git] DocuMind – Production RAG Platform

Next.js 15, Gemini, Pinecone, LangChain, MongoDB, SSE

- Engineered a scalable Retrieval-Augmented Generation pipeline with PDF parsing, chunking, embeddings, and vector indexing in Pinecone.
- Integrated Gemini for grounded answer generation with query rewriting to reduce hallucinations.
- Implemented SSE-based streaming responses and per-chat namespaces to optimize retrieval latency and relevance.
- Built secure auth and persistent storage for multi-session chat workloads.

ADE – Agentic Dev Environment (Desktop App)

Electron, React, TypeScript, Node.js, SQLite, Monaco, xterm.js

- Built a desktop IDE that runs parallel Claude Code sessions, each in its own git worktree, with diff review and merge built in.
- Added an integrated terminal, VS Code-exact syntax highlighting, notes, voice dictation and a mobile prompt tunnel.

EDUCATION: B.Tech CSE, OP Jindal University | 2022 - 2026 (8.5 CGPA)

CERTIFICATIONS: Cisco - Cybersecurity | IBM - Linux and Shell Scripting | IBM - Databases and SQL

AWARDS: Winner - Technorollix 2025 HackSprint (Hackathon) | Winner - Technorollix 2025 Codigo (Coding Contest)

EXTRA-CURRICULAR: Football - School National Player, University Team Lead | Athletics - 5 KM Run Winner | Content consuming, Reading & Poetry
